

A scalable, intuitive, touch screen solution for event capture that can run on any device. The most flexible and best available camera based system to increase your process OEE (Overall Equipment Effectiveness).

- Ease of use in any environment – touch screen interface with industry standard screen gestures
- Utilizes the LSP module (Live, Stop and Play) – instant interaction between these functions
- Multiple camera support with global synchronization
- Wireless control with scalable interface resolutions so any device attached to the ECS or mill network can access the system (phone, tablets, etc.)
- Completely non-proprietary hardware to support GigE camera video capture
- Video image processing that can provide proactive indications of process faults, variations and defects
- Seamless interaction to Web Inspection and the IMDR Total Process Quality Control

Event Capture Systems get to the root of the problem faster than ever before. Review, annotate, and communicate issues in perfect clarity.
